

# What is a body?

---

- GP: "How are you doing?"
- *Patient: "My breathing hasn't changed."*

A communication problem?

A communication problem?

- GP: "How are you doing?"
- *Patient: "My breathing hasn't changed."*
- GP: "It's good you haven't been in hospital for a while."

A communication problem?

- GP: "How are you doing?"
- *Patient: "My breathing hasn't changed."*
- GP: "It's good you haven't been in hospital for a while."
- *Patient: "I'm still quite breathless."*

A communication problem?

- GP: "How are you doing?"
- *Patient: "My breathing hasn't changed."*
- GP: "It's good you haven't been in hospital for a while."
- *Patient: "I'm still quite breathless."*
- GP: "Do you need a prescription for any of your medications?" ...

Do we need routine  
assessment?

- Experience is hard to describe
- GP avoid asking about 'untreatable symptom'
- Clinically important symptom?

“My breathing requires muscle work or effort?”

# Local biologies and bodily noise

*“Old age never arrives alone”*
