Subject: CACNA1C Gene changes

*I can confirm that the ICB **does not hold the information requested**; please see responses below:*

QUESTION	RESPONSE
How many individuals were identified to have a CACNA1C gene change as a result of genetic testing during the year 2022 and during the year 2021?	BNSSG ICB does not hold this information. We advise you to contact the acute hospital trusts; North Bristol NHS Trust (NBT) and University Hospitals Bristol and Weston NHS Foundation Trust (UHBW):
When a genetic change is found it is categorised according to the ACGS Guidelines (Association for Clinical Genomic Science). Ideally your response to how many individuals identified would indicate the classification of the findings with regard to number of individuals ie. Pathogenic, Likely pathogenic, Variant of Uncertain Significance, Likely benign and Benign.	https://www.nbt.nhs.uk/about-us/information-governance/freedom-information/request-information / foi@nbt.nhs.uk https://www.uhbw.nhs.uk/p/how-we-use-your-data/freedom-of-information-foi-requests / FreedomOfInfo@uhbw.nhs.uk

The information provided in this response is accurate as of 10 May 2023 and has been approved for release by Sarah Truelove, Deputy Chief Executive and Chief Finance Officer for NHS Bristol, North Somerset and South Gloucestershire ICB.
